RSA Conference 2018

San Francisco | April 16–20 | Moscone Center

SESSION ID:

EVALUATING AI AND ML BASED SECURITY PRODUCTS

MODERATOR: **Anup K Ghosh**
Founder & Former CEO, Invincea
@AnupGhosh_

PANELISTS: **Mike Spanbauer**
Vice President of Research & Strategy
NSS Labs

Chad Skipper
VP Competitive Intelligence & Product Testing
Cylance

Liam Randell
President, Critical Stack
A Division of Capital One

- Part I: Independent Third Party Testing is Essential- Why?

- Part II: Gaps in Testing for Next Gen Security Products

- Part III: Future Directions in Testing for ML & AI Products

Format: panel discussion + audience discussion on each topic – we want your participation!

RSA Conference2018

Apply What You Have Learned

- Next week you should:
  - Identify the key questions to ask of product vendors on their AI/ML based claims (see https://www.darkreading.com/operations/5-questions-to-ask-about-machine-learning/a/d-id/1330930)

- In the first three months following this presentation you should:
  - Define a strategy for evaluating third party product claims
  - Create or train internally a product evaluation role
  - Enlist the resources of third party independent testers

- Within six months you should:
  - Drive a culture internally of evaluating products to meet gaps not simply to get the latest and greatest industry tools.
  - Communicate to vendors and test organizations you will use independent third party testing to evaluate products and they will adapt accordingly.
